

Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

## FLORENCE HAS MANY LEASERS BREAKING ORE

Showing Throughout is Most Encouraging for an Increased Tonnage of Ore

Six lessees are working in the Florence, with the most important prospecting being done by the Bankers and Red Hill, the former advancing three faces. Nearly 500 feet has been driven in the Bankers block since work was started, showing the big scale on which this ground is being developed. Although only low assays have been obtained, the conditions in both the Bankers and Red Hill blocks are encouraging and there is said to be a good chance for opening ore. The other lessees are Helden, Donald and Giles, Reed and Brocklebank.

The Jumbo drift in the Bankers has been driven 101 feet. The formation is about the same as usual, but the vein has turned to the right and is straightening, each of these changes being an improvement. The baby crosscut has been advanced 166 feet without entering the hanging wall of the vein. Two more seams, heavily impregnated with sulphides, talc and quartz, have been cut in the Daisy crosscut, which is 127 feet long. The second seam entered as assayed \$4 in gold.

The Red Hill is still crosscutting south on the 700-foot level of the Red Hill shaft and three promising veins have been penetrated. This crosscut is being driven in the hanging wall of the main vein of the Florence.

Helden is obtaining occasional parts of his ground. He is driving good assays in prospecting in all short crosscuts and drifts.

Reed, on the 358-foot level, is still driving east into the hanging wall and also is driving a raise on a seam of quartz of promising appearance. Brocklebank, on the 258, continues to save a little ore in the foot-wall of the main stope in his block.

## RICH FIND MADE ON MINA MABEL MINE

A rich and important silver strike is reported to have been made in the Mabel mine, adjoining the old Garfield property, west of Mina. The property is being operated by the West End Consolidated Mining company of Tonopah, under a bond. The strike, which was unexpected, was made at a depth of 194 feet below the tunnel level, at a depth of about 300 feet from the surface. In running a drift to cut the ledge exposed at points above a round of shots opened up a six-foot body of high grade silver ore. Another round opened six feet more. At the time of the report the extent of the discovery had not been fully disclosed. No ore body was expected at this point as the drift had not yet reached its objective, hence the unexpected discovery is all the more important as showing the great mineralization of the ground. It begins to look as though under the aggressive and efficient mining methods of the West End Consolidated, that the Mabel was to become a creditable rival of its neighbor, the old Bonanza Garfield—Western Nevada Miner.

## STORM CLOUD PASSES INTO HANDS OF REED

Well Known Cattleman Takes Over Property at Camp Taylor, Early Shipments Promised

Transfer of the Storm Cloud group of claims to O. K. Reed, well known stockraiser and rancher, Edward Reed, James Shea and Homer Backley, under bond and lease, has been consummated and announcement follows that an active campaign of development will immediately be inaugurated. The Storm Cloud is located at Camp Taylor, five miles south of Golden Arrow and a splendid mineral showing is in evidence. Past development has consisted of sinking a shaft to a depth of 70 feet, while drifting has progressed for 20 feet in each direction. The ore vein was found intact down to the 70-foot point, with varying values, the lowest being \$21 a ton, with others going as high as \$300. In the drifts values were neutral and for this reason the option held by J. C. Crumley and George Wingfield was surrendered. That the ore vein will be found to be persistent to good depth is not disputed by reason of the fact that the ore is showing just as strong in the bottom of the shaft as it has at any time during the entire progress of sinking.

## COMPLETE PAYMENTS ON KAOLIN PROPERTY

The last payments on the properties controlled by the American Clay company was made this week by Mr. I. D. Landis, president of the company and extensive improvements are planned for the holdings which are now being surveyed for patent by United States Deputy Mineral Surveyor A. D. Knowlton, says the Caliente News.

Mr. J. Boggs, well known consulting engineer, has just completed an exhaustive examination of the deposit and his report states that the clay now developed and available for cheap extraction, will compare favorably with the highest grade European China clay now on the market. Engineer Boggs has recommended the immediate installation of a milling plant at Landis, the new spur on the main line of the Union Pacific, named after Landis, the president of the American Clay company, and the machinery for this plant has now been ordered.

When the plans of the company have been completed, it is expected by Superintendent Joe Kutcher that 50 tons of high grade crushed material will be shipped to the finishing factory every day, from this big tonnage every variety of high grade china will be manufactured. Situated only 10 miles south of Caliente the activities of the American Clay company are most beneficial to the Caliente district and the continued successful development of the big clay deposit will in all probability lead to the discovery of further deposits.

## FORD PLANNING DEVELOPMENT IN OLD MEXICO

Would End Forever the Internal Strife That Has Worried the Nation So Many Years

DETROIT, July 25.—Development of Mexico industrially and agriculturally to a point where it will take its place as one of the leading powers of the world is the plan of Henry Ford.

This has been learned by the Associated Press from sources close to the manufacturer. Mr. Ford, it was learned, proposes to end forever the internal strife in the southern republic by "putting the people to work" as he expresses it, by making it possible for the people to obtain education, and by devoting ways elevating the masses in the country to the highest possible standard.

The motor manufacturer wants to keep the hands and minds of the Mexican common people occupied so "they will have no time for fighting." This it became known is the substance of Mr. Ford's theory, one that he hopes to carry out in the near future by erection of a number of factories throughout the more important states. In short, it was said, he hopes to reveal to the people of Mexico how they can help themselves.

The first step in this program may be taken soon with the establishment of a Ford motor assembling plant in the state of Coahuila, probably in Saltillo. Business interests of that city and the governor of the state are known here to be eager to bring about the industrial development. Mr. Ford, it is known, would enter upon his development program immediately upon erection of the necessary factory buildings. Similar enterprises would be established by Mr. Ford in other parts of the country if the plan is carried out, it was intimated.

Mr. Ford is said to believe that if the Mexicans once are taught the value of industry, better methods of agriculture and their possibilities individually and as a nation, the advance of the country will prove to be one of the most notable in history. The manufacturer is known to have an abiding faith in the people of the country.

The Bonanza is not afraid and dares print all the news.

## BIG GYPSUM DEPOSIT NEAR VIGO IS SOLD

The sale of two claims covering a deposit of Gypsum near Vigo, 40 miles south of Caliente is reported by John B. Bradshaw, the purchaser being F. L. Parriot, a prominent oil man of Pomona, California, who expects to erect a plant at Vigo, which is situated about 1½ miles from the deposit with a down grade all the distance. Associated with Bradshaw as part owners in the Gypsum property are Moody and Matt Reese, A. D. Martin, Walt Huston and A. L. Scott the consideration stated to be substantial.

Engineers who have recently examined the deposit claim that there is 6,000,000 tons of high grade gypsum exposed assaying 98.5 per cent pure with great possibilities of development. An active demand now exists for deposits of the non-metallic substance and an increasing number of prospectors are turning their attention to this interesting industry. —Caliente News.

## MASONIC SHOWING RENEWED ACTIVITY

Considerable mining activity in the Masonic district is reported by R. A. Frazer, Reno mining engineer, who with J. C. Bray, recently took over the Pittsburgh Liberty mine there. Lessees are now busy in the district and according to Mr. Frazer the Shennung and Decker leases on the Masonic Mines Association ground have been consolidated and it is reported that the old mill at the Kentucky mine near Sweetwater will be moved to Masonic by Shennung and Decker.

Two other leases on ground of the Masonic Mines Association have been let to Los Angeles people. It is reported and arrangements to start work will be made in a few days.

Bray and Frazer recently made two small shipments of ore to the Hazen sampler. The ore ran from \$2400 to \$4600 a ton, Frazer said.

The Stall Brothers are making arrangements to reopen the 75-ton cyanide mill for the purpose of milling ore from their own property and also from the Pittsburgh Liberty as well as other custom ores.
